

ARCHITECTURAL SOLUTIONS

WITH COMPLIMENTARY OR REPLACEMENT INFILL PANELS

Glaz-Tech Industries offers glazing infill panels to further provide additional architectural solutions for storefront and window systems. Its durable and attractive design contributes seamlessly with storefront applications and insulated units. Glaz-Tech's infill panels offer several architectural benefits :

WATER RESISTANCE

GlazeGuard® WR panels are highly effective against moisture intrusion and also ideal for installation due to its lightweight design. GlazeGuard® WR panel's benefit from its innovative polypropylene core and stabilizer material.

ECONOMICAL ALTERNATIVE

With several different compositions and finish options, GlazeGuard® can provide an economical alternative to other glazing solutions while still providing aesthetic interest and value. Little or no maintenance is required and most grease, dirt, oil, and other foreign material can be easily cleaned from the surface.

Attractive alternative or complement to glass with little or no maintenance required.

- Water Resistant
- Economical Alternative
- Complement to Glass
- Increased Thermal Value with Foam Core

STOCK AVAILABILITY

- Metallic Silver
- Shasta White
- Classic Bronze
- 60 Plus Standard & Premium Colors Available Upon Request

INSTALLATION OVERVIEW

GlazeGuard® panels are designed to be 'glazed' into an aluminum storefront or window system. Panels are first set into the glazing channel and finished using an acceptable wet seal compound or water tight gasket. To prevent moisture intrusion, panels should be placed on setting blocks inside the channel. No perimeter moldings are available with GlazeGuard® panels as they are not designed for installation as a wall cladding.

GlazeGuard® is a registered trademark of Citadel Architectural Products, Inc.
