PREFACE

Computer controlled glass cutting tables offer the most advanced technology available for the fabrication of shapes. As your glass provider we've made a substantial investment to provide you with the highest dimensional accuracy as well as quality of scores by purchasing an automated table.

This machine has extreme flexibility but like all computers must be told exactly what to do. This catalog has been prepared to simplify the input of shape information. It illustrates exactly what is required when placing an order to eliminate the unnecessary forwarding of templates and other extraneous information, allowing us to service you even better.

CATALOG USAGE

A few simple steps need to be followed when using this catalog:

1. For each non-rectangular lite/unit ordered you will need to supply a shape number along with a set of dimensions.
2. Dimensions are specified in the Base, Left, Right, and Top technique used by most glaziers. (In some instances more than four dimensions are required to adequately define a shape. These dimensions have been given the highly original names of 'S1' and 'S2'.)
3. To insure accuracy, all measurements are taken perpendicular to the frame in which the glass will be glazed. The length of diagonal sides is never requested, but rather calculated based upon more easily obtainable dimensions.
4. The radius of a shape may not exceed 500 inches. Larger shapes may be drawn in another program, either CAD or digitized, and then imported.
5. All shapes are processed as if you were on the outside of a building looking in. Please take care when ordering coated glass to insure you've selected the shape that best matches your requirements.
6. If you don't find an immediate match of a shape number for the lite/unit you need, try to rotate your piece. Blue thumbnail figures under each shape will assist you in seeing the orientation potentials of each of our standard shapes.

SHAPE CATALOG

7. Edgework side numbering appears on the outside perimeter of the shape for those shapes that permit edgework. Refer also to “Edgework Side Numbering” on page 52 for an overview of all shapes that may have edgework applied.
8. Red lower-case lettering marks the corners of a shape and may be used to indicate the positioning of logo(s) on the glass.

To insure that each edge of the glass gets the type of fabrication you need, please use the “side numbers” when stating your fabrication needs. If you have requirements not shown above, please contact our order desk or your salesperson for more details.
